Full / Part-time employment • Remote / Hybrid / On-site

ABOUT ME

Frontend developer with less than 1 year of experience building web applications with React, Next.js and TypeScript. REST API integration (RTK Query, TanStack Query), reusable component architectures, FSD, responsive interfaces. 6+ deployment-ready projects on Vercel.

KEY SKILLS

React | Next.js | TypeScript | JavaScript (ES6+) | Redux Toolkit | RTK Query | TanStack Query | React Router | openapi-fetch | HTML5 | CSS3 | Tailwind CSS | SCSS / SASS | Styled Components | Material UI | Shadcn UI | Radix UI | Storybook | Framer Motion | Vitest | Jest | Git / GitHub | Vite | Docker (basics) | Figma | npm / pnpm | CI/CD (Vercel) | REST API | WebSocket / Socket.IO | Feature-Sliced Design (FSD) | Jira | ClickUp

WORK EXPERIENCE

Akor Direct (Poland - web studio) August 2026 — Present

Frontend Developer

Collaborated with the company on the development of projects: an events and communication platform, a music platform, a media content creation and promotion project, an e-commerce platform for online ordering of sushi and related products, etc...

KEY RESPONSIBILITIES:

- Designing reusable UI components and frontend architecture (React + TypeScript, FSD, TanStack Router), a library of 13+ components on Radix UI documented in Storybook
- REST API and WebSocket (Socket.IO) integration for real-time data exchange
- Module architecture migrations: reworking the API client and extracting business logic from the UI — reduced coupling and regressions
- Responsive, cross-browser interfaces with a focus on accessibility (a11y) and performance
- Forms and validation (Zod / React Hook Form), state management (Redux Toolkit)
- Render optimization: lazy loading, code splitting, memoization
- Implementation of feature modules: infinite scroll (IntersectionObserver), server-side proxy with retry and request cancellation (Next.js Route Handlers), media processing pipeline (S3 presigned URL, Canvas API)
- AI integration in development: evaluating and shaping the application architecture with AI, working with AI agents Codex and Claude
- Code review, task decomposition, collaboration with backend on API contracts

•**Team:** PM, UI/UX Designer, Frontend, Backend, QA

•**Process:** Agile / Scrum, code review, deployment to Vercel

ACHIEVEMENTS

- Designed a chat module from scratch on Socket.IO (sending, delivery, read receipts, reply navigation) — closed the full real-time communication cycle, **increasing user engagement on the platform**.
- Optimized the application's initial load: introduced code splitting and lazy loading via React.lazy + Suspense — this **reduced the initial JS bundle by 6.6% (–10.7 KB gzip: from 160.5 KB to 150.5 KB) and sped up first-page rendering by 15–60 ms on mobile devices**.
- Implemented end-to-end typing of the API layer from an OpenAPI specification (openapi-typescript + openapi-fetch) with automatic token refresh — **eliminated** runtime errors at compile time, **reduced API integration debugging time**.
- Recommendation from director Dmitry (Akor Direct, Poland).
